Domain health

General summary

> dcdiag

Comprehensive test suit

> dcdiag /c /v

Indivual test

> dcdiag /test:dns /v

Clean up old servers

Domain Controllers

1. Open dssite.msc -> Sites -> Default-First-Site-Name -> Servers
2. Delete old servers

Certificate Authority

1. Open dssite.msc
2. View -> Show Services
3. Services -> Public Key Services
4. Delete old server from:
   - AIA
   - CDP
   - Certificate Authorities
   - Enrollment Services
   - KRA

DNS

Run:

> Get-DnsServerResourceRecord -ZoneName "_msdcs.your.domain"

Look through records to make sure no old servers are in there. Use DNS manager to remove any that shouldn't be there.

DHCP

> Get-DhcpServerInDC

> Get-DhcpServerv4OptionValue -ScopeId 10.1.1.0
